Cover Letter

I am seeking full-time opportunities in the Software Engineering domain. I am a graduating CS student with experience in backend development, testing frameworks, deploying data-driven applications, data science/engineering, and machine learning. I am proficient in Python and AI/ML tools like OpenAI and Dataiku. As a recent City College of New York graduate with a Bachelor of Science in Computer Science, I have honed my technical skills through various hands-on experiences.

My recent role as a Software Engineer Intern at HRHouz equipped me with expertise in backend development, utilizing Python and AI models to enhance functionality and efficiency. I significantly contributed to the implementation of a resume PDF scanner, collaborating closely with cross-functional teams to deliver a robust solution that was productionalized.

Moreover, my projects, such as the Employment Ready application and the Music Recommendation Model, underscore my proficiency in designing user-centric experiences and my ability to translate complex technical concepts into user-friendly interfaces. These experiences have taught me the importance of centering principles of equity and inclusion in product development.

I am particularly excited to contribute and collaborate with stakeholders to research, design, and deliver compelling digital experiences. My proficiency in GitHub and other developer tools, coupled with my collaborative approach and strong organizational skills, position me well to make meaningful contributions to the team.

Thank you for considering my application. I look forward to learning how I can contribute to your team.

Sincerely,
Daphne Tang
